

두 개의 독립 축: update timing × memory medium

	Within-query	Post-response	Periodic sleep
Ephemeral / state	KV / recurrent state	session fast state	state compaction
External text · vector · graph	retrieval write	Letta / Mem0	Dreaming / graph rebuild
Parametric weights · adapter	TTT / neural memory	async adapter	replay / distill / refresh

같은 medium도 timing이 다르면 SLA · data horizon · validation이 달라진다
